

Perspex® Colour Guide

Overview:

Perspex has a wide range of standard range of clears, opals and solid colours are highly regarded and widely used. Our colours can also be colour matched to virtually any substrate by our in-house laboratory technicians. It is this versatility of colour matching that sets us apart from the competition. Our relatively short lead times from the colour matching stage through to full scale production gives Perspex the flexibility to be used in almost any application.

Main features:

- Exceptional light transmission with no inherent edge colour
- Excellent resistance to outdoor weathering
- High gloss, hard surface
- Good thermoformability
- Easy to clean
- UV Stability
- 17 x stronger than glass
- Safety - fire retardent thermal properties
- Low density
- Clears, Tints, Opals and wide colour range available
- Cold bending
- Fully recyclable.

Perspex Standard Range

Our Standard Range includes our most popular colours in a range of solid colours, translucents and tints. If you don't see the colour you are looking for, we can custom match any colour supplied to match exactly what you are looking for!

About our Colour Guide

Perspex has been in the market for over sixty years, and our standard range of clears, opals and solid colours are highly regarded and widely used. Perspex can also be colour matched to virtually any substrate by our in-house laboratory technicians. It is this versatility of colour matching that sets us apart from the competition. Our relatively short lead times from the colour matching stage through to full scale production gives Perspex the flexibility to be used in almost any application.

The colours shown in this colour guide are a selection from our standard colour ranges. These colour swatches are an indication of colour only and cannot show a true representation of colour and transparency.

For further information, please contact us to view actual colour samples by our sales team.
